

CHANGE REQUEST	
Project Name	SK Trails
Requested by	Kamran Aqeel
Request Date	November 22, 2024
Description of the Requested Change (Completed by the Requestor)	
The results of the user's filter request submission are not being shown. I have to therefore eliminate the filter option and come up with another method of showing the user the list of trails.	
Benefit of the Requested Change (Completed by the Requestor)	
Since it is simpler to implement, it would be advantageous to remove the users' filter option and simply present the list of trails and their data via a location search.	
Impacts to the Project (Completed by the Project Manager)	
Eliminating the user's filter option would prevent us from meeting our deadline of finishing the project a few days ahead of the presentation showcase. Since the primary objective of our web application was to enable visitors to select a trail according to their preferences, the quality of the search page will be degraded. Eliminating this choice carries a significant risk and will cause us delays in our demo completion.	
Change Request Decision (Completed by the Project Change Committee)	
Since everyone on the team has given their full approval, Kamran Aqeel will implement the update, and the demo will display the search page's mostly finished product.
